This manual contains operating instructions for the use of the LifeSafer FC100 Ignition Interlock Device (IID) with or without a camera. **Not all jurisdictions require the addition of a camera. If you are not required to have a camera please disregard any instructions on camera usage.**

The purpose of an IID is to prevent vehicle start-up until the user has passed an alcohol test. The IID is not an indicator of your level of impairment or your ability to safely operate a vehicle. You must rely on your own judgment. If you have been drinking alcoholic beverages, please find an alternative form of transportation.

This handbook explains the use of the LifeSafer FC100 IID, including operation, reporting and care of the unit. Please take the time to read this handbook while you are waiting for the IID to be installed in your vehicle, so any questions you may have can be answered before you leave.

Today, you will be trained on the proper use of the LifeSafer FC100 IID. Your service provider will also confirm the date of your first service appointment. At each service appointment the device’s event log will be downloaded and reported to your Monitoring Authority.

**WARNING:**
It is your responsibility to keep your IID in good working order. You will be responsible for any lost or damaged parts of the unit. Please call 1-866-614-8276 for details on our Loss Protection Plan.

**LIFESAfer FC100 Handset**
The LifeSafer FC100 Handset takes your breath sample into the fuel cell chamber. The presence of alcohol in the sensor chamber causes the fuel cell to produce an increased electrical current, which is measured and translated into an equivalent blood alcohol concentration (BAC). You must complete a breath test when requested and the Device will record your Breath Alcohol Concentration (BrAC).

**State Camera Requirement**
Some states require the addition of a camera so that the person taking the test can be identified and submitted to a monitoring authority as part of the reporting process.

The LifeSafer FC100 Camera takes your picture and will not let you take a test until it has you and the Handset in focus. The Handset must stay in view of the Camera at all times as you blow and test, otherwise the device will ABORT and you will have to start over.
HOW DOES THE DEVICE WORK?

LIFESAVER FC100 CAMERA

The LifeSafer FC100 with Camera System Handset is controlled by the Camera. The Camera must detect your image and “see” the target on the back of the Handset before it will allow you to take a test. Hold the Handset 4-8 inches from the front of the Camera module in order to get the Camera to release the Handset for the test.

In bright light it may be necessary to slowly wave the target on the back of the Handset around in front of the Camera to get the target in clear view. Once the Camera finds the Handset the “BLAP-BLAP” sound will stop. The BLOW light will flash and the Handset will make a higher pitched “BEEP-BEEP” indicating you may start a test.

TIP: If the Handset stays stuck in WAIT make sure your hand is not covering the target. Grip the Handset towards the bottom as shown in the photo.

TARGET TRACKING AND TESTING POSITION

TARGET TRACKING

Target tracking requires that you keep your image and the Handset in full view of the Camera throughout the test in order to obtain valid photographic identification of the tester.

TESTING/TRACKING POSITION

After the Handset has been detected and released to allow a test, it is time to blow into the device. While taking the test the best area to hold the Handset is 18-24 inches from the front of the Camera module. The Camera module is placed on a swivel mount to allow adjustment. Adjust the Camera so it is pointing towards where you will hold the Handset while sitting in the driver’s seat.
**TIME TO TEST**

You must complete a breath test that indicates your Breath Alcohol Content (BrAC) is below the fail point required by the state before it will allow you to start your vehicle.

When you are ready to take a test, the first step is turning your ignition switch to the “ON” position.

Once the Device wakes up and the WAIT light glows orange, turn the key back to the “OFF” position.

**NOTE:** Under normal operating conditions, the WAIT light stays on momentarily while the sensor warms up. If you are operating your Device in extremely cold temperature conditions (-40°F), the Device can take up to 4 minutes to warm-up.

**Camera Light (Red)**

While the WAIT light is flashing and the Handset is emitting a “BLAP BLAP” sound, the red light on the Camera will be on, indicating that the target on the Handset has not been detected.

Hold the Handset within 4-8 inches of the Camera module, gripping the Handset at the bottom with the target in clear view of the Camera module. You may have to slowly wave the Handset around in front of the Camera module to detect the target.

**Camera Light (Green)**

When the target tracking feature is turned on and the Camera is successfully tracking the Handset during the test period, the green light on the Camera will illuminate.

**WAIT Light (Orange)**

Once a test has been initiated, the WAIT light glows indicating the sensor is warming up, and the Handset is preparing to accept a breath test.

**Blow Light (Green)**

Once the sensor is ready for a test the Green BLOW light comes on.
**Blow Light (Green)**

Once the target is detected, the **BLOW** light will flash green indicating the Device is ready for a breath sample. You will also hear 2 high pitched beeps while the **BLOW** light is flashing to alert you that a breath test is requested. Take a deep breath and immediately bring the Handset to your mouth to test, keeping the target in view of the Camera.

While taking a test, you must also make a TONE, like a musical instrument. It is most easily accomplished by saying the word “DO”, “DAA” or “DEE” into the mouthpiece as you blow. The blowing pressure must be sufficient in strength and duration to ensure a proper and accurate test. When you start to blow and make the “DO” tone, (steady and solid, never too hard or too soft), the Device will emit a low sound, indicating that you are testing properly. Continue the test until the sound stops and a higher pitched tone sounds.

If you do not deliver a sufficient flow of air or the tone is not delivered properly, the Handset will sound a higher-pitched triple-beep and the red **ABORT** light will come on.

**If you do not hear the Device sound, or the Device **ABORTS, stop blowing. You need to start over.**

**NOTE:**
- You should concentrate more on blowing than on the tone.
- Extreme blowing pressure is not necessary.
- The tone must be delivered in a steady and continuous fashion.
- Deliver the same tone rather than going up or down the musical scale.
- You must say the tone continuously for the entire five seconds.
- It may help to bite down with your teeth and seal your lips on the mouthpiece.

Blowing and making a “DO”, “DEE” and “DAA” for a breath test will quickly become second nature to you. Do not blow too hard. Start the test blowing softly and increase your blowing pressure until you hear the tone that indicates you are blowing hard enough. Continue to blow steadily at that level for the length of the test.

**Pass Light (Green)**

When the Device receives a proper breath sample the **PASS** light will glow and a triple tone will sound indicating a successful test.

**You can start your vehicle!**

**Run Light (Green)**

If the result of the test is a **PASS** or a **WARN** the Device will subsequently Flash the **RUN** light and close the ignition relay, allowing a vehicle start. The relay will remain closed for 1 minute while waiting for the engine to start. If the engine is not started the relay will open back up and the Device will go back to sleep and another test will need to be taken. When the engine is started, the **RUN** light will change from **Flashing** to **On Steady**.

Once the engine is shut off, the **RUN** light will flash for the duration of the Stall Protect period (when a re-start is allowed without requiring a test). Once the **RUN** light goes out, the Device will go into a “sleep state” where it is waiting for the driver to start a new test.
**Warn Light (Orange)**
The Device has detected the presence of alcohol on your breath below the preset **FAIL** level.

A substance that left trace amounts of alcohol in your breath may have caused this. If that substance happens to be a recently consumed alcoholic beverage, you need to keep in mind that your blood alcohol level may be rising and you may FAIL on the next test and a Violation will be recorded.

**TIP:**
Eating, drinking, using mouthwash, or medicines that contain alcohol immediately prior to a breath test may result in a FAILED test. If this happens, rinse your mouth out with water, take a few deep breaths of fresh air, and retest after waiting at least 5 minutes.

**Fail Light (Red)**
The Device has detected the presence of alcohol above the preset **FAIL** level.

If the key is in the ON position and the vehicle is running the Device will ask for a Retest at random times. When the device wants you to Retest, the **BLOW** light will be flashing and 2 high pitched BEEPS will sound. If the Device does not receive a passed test within the first several seconds after asking for a Retest, the Device will begin to BEEP louder. If the Device does not receive a passed test after a few minutes, an additional alarm may sound. You now have a limited time to pass a test or pull the vehicle over and turn the key OFF or a Violation will be recorded.

Turning the vehicle off prior to taking a Retest when requested is a Violation in some jurisdictions. Ask your Service Provider if you have questions on the rules in your area.

Take the Retest only when you feel it is safe to do so. You are encouraged to safely pull the vehicle out of traffic to take the Retest. **IT IS YOUR RESPONSIBILITY TO SAFELY TAKE THE RETEST.** You have several minutes from the time the unit first asks for a Retest to pass a test.

Depending on your jurisdictional requirements, if you fail a retest, you may receive an audible warning notifying you to pull the car over out of traffic and turn off the vehicle.

**CAUTION:**
Always exercise safety first. The Device is designed to allow you to continue driving and safely Retest without taking your eyes off the road. However, if you are uncomfortable, it is recommended that you pull off the road and come to a complete stop before taking the Retest. It is your responsibility to be in a safe place to take the test in a manner not to put yourself or others at risk.
**Abort Light (Red)**

The **ABORT** light indicates the Device did not detect a proper breath sample, meaning either the blow was too hard or too soft, or the tone was not detected. You will also hear a distinct tone upon aborting a breath test. Aborting the test in this fashion does not mean you failed the test and is different than a Camera Abort caused by taking the Handset out of view of the Camera. (See Camera Abort on next page).

Once you have aborted, the **WAIT** light will come on for 45 seconds while the Device prepares itself to accept another test.

If you have too many Aborts, the **WAIT** light glows while the Device is resetting or re-stabilizing itself. The **WAIT** light could stay on for up to 5 minutes during this wait period. When the Device is ready for another test, the **WAIT** light will flash and the Handset will emit a ‘BLAP-BLAP’ sound.

If the Device has not stabilized after the wait period and the Device is not ready to test, the **SERVICE** light and **LOCKOUT** light will begin to flash and the **WAIT** light will stay on. If this ever happens call your Service Provider immediately.

**TIP:** If you get an ABORT, change your mouthpiece, try to relax, take a couple of deep breaths and try again. You should never blow so hard as to make yourself feel light-headed or dizzy.

**Camera Abort**

If the Camera is unable to track the Handset during the blow sequence, the **ABORT** light will go on. You will also hear a ‘BLAP BLAP’ tone and the orange **WAIT** light will flash. Once you have aborted, the orange **WAIT** light will come on for 45 seconds while the Device prepares itself to accept another breath test.

**NOTE:** When the target tracking is turned on and the Camera is successfully tracking the Handset during the test period, the green light on the Camera will illuminate. If target tracking is enabled and you do not observe the green light come on during the test, you are most likely not in the correct position. The Camera optimally tracks the Interlock at a distance between 18 - 24 inches. Target tracking is not enabled in all jurisdictions.

**TIP:** Keep the Handset Target in clear view of the Camera throughout the Test!
**Lockout Light (Red)**

One or more FAILS in a row will result in a LOCKOUT status for several minutes.

While the **LOCKOUT** light is glowing red you cannot take another test. You must WAIT. After the **LOCKOUT** light turns off you may test again. You are encouraged to rinse your mouth out with water to remove traces of mouth alcohol and test again.

**Service Light (Red)**

The Device will remind you several days before your program service due date by flashing the **SERVICE** light.

Periodically you will be required to have the device’s data downloaded, reviewed and reported by the service provider to the relevant regulatory authority. The device, vehicle and wiring may be inspected for signs of tampering, and the calibration of the device will be checked.

The following is an example of the information the device records and the type of information that the service provider may be required to report:

**Recorded Violations:**

- **Start-up Violations** – Starting the vehicle without passing a test within the required time frame, which varies by jurisdiction.
- **Power Disconnect** – Power is lost to the device’s Relay Box. You should document any reason why the power was disconnected.
- **Failed Test** – Failing one or more test attempts indicating BrAC at or above the Fail level.
- **Retest Refused** – The driver failed to pass a Retest during the allowed period of time.
- **Retest Failed** – The driver took the Retest and Failed one or more test attempts at or above the Fail level.
- **Lockouts** – The number of Lockouts between service is recorded.
- **Early Service Recall** – If you have met the maximum number of any Violations an Early Service Recall will be recorded and the device will prompt you to return to the Service Center.
- **Time of Vehicle Use** – All vehicle starts are recorded and may be used to determine if the vehicle was operated during a restricted driving time.

**Required Reporting:**

**Non Compliance**

- Failure to report for scheduled monitoring check or any Early Recall that results in a Lockout
- Failure to pay for program services provided
- Failure to meet any other terms and conditions of the Interlock Program
Vehicle Electrical Systems
The device operates off your vehicle's electrical system. If your vehicle is over 10 years old, you should have the electrical system checked by an automotive professional.
If your vehicle has electrical problems or a failed alternator, the power surges can damage the device and void the warranty. If applicable maintain proper water-levels in your car battery (use distilled water) and keep the terminal connections clean and free of corrosion. The device will usually work with an old battery, but bad or weak batteries are the primary cause of problems that can result in Early Service Recall and an unscheduled visit to the service provider at your expense. If your car battery is weak or old, ask your LifeSafer Service Provider what your jurisdiction’s regulations are for having it replaced. Since all power disconnects are recorded and reported, you must document each time the battery is disconnected, or the device is disconnected from power.

Avoid Contact with Moisture and Dirt
The device is not waterproof. It is an electronic product. Keep it out of the rain. Keep the device stored off the floor of your vehicle. Excessive contact with moisture, dirt, mud, or rain will damage the internal circuitry for which repair or replacement of the device is your responsibility.

Avoid Electro-Static Discharge (ESD)
Place the key in the ignition before picking up the handset. ESD, especially during the cold and dry winter months, is common and may damage the device.
3. MONITOR APPOINTMENTS: The Client shall return the Vehicle to the designated service center, which the Service Provider may reasonably change from time to time, for regularly scheduled monitoring as confirmed with the Client when the Vehicle is monitored. If an early recall is issued, the Client shall follow the lights and tones displayed on the System, the Client is obligated to return the Vehicle to the designated service center for unscheduled monitoring within the number of days prescribed by the Program.

Upon payment by the Client, the Service Provider will do the following in accordance with Program requirements:

• monitor the Vehicle when requested by the Client
• retrieve stored information from the System's events log
• prepare a report for the Administering Authorities as to the Client's compliance or non-compliance with the Program; and
• establish de-installation of the System for a vehicle change or at the end of the Program, as well as other charges not specified in this Section. No charge for

4. SERVICE PROVIDER'S RESPONSIBILITY: Neither the Service Provider nor any of its employees, agents, or representatives shall be responsible for any loss or damage to the Vehicle or its contents during any installation, servicing, monitoring or removal of the System. The Service Provider will repair any damage to the Vehicle caused by the Provider: (a) in connection with providing services, (b) for which the Provider is responsible, (c) incurred at any time and for any reason, if unscheduled service is required, the Client shall notify the Service Provider at least 24 hours in advance. Any missed appointment made to provide the Service Provider a second chance at the missed appointment fee as set out in the Service Provider's Fee Schedule.

5. 7. LOSS PROTECTION PLAN: The Client agrees to indemnify and hold harmless the Service Provider, its affiliates, and their respective employees, agents, and representatives from and against any liability arising therefrom. The Client will pay all charges, costs, and expenses incurred by or on behalf of the Service Provider if the Service Provider is

6. PERSONAL DATA COLLECTION AND REPORTING: The Client acknowledges that the System contains various personal data collection, recording, monitoring, storage, deletion, inspection, and reporting capabilities, which may include a camera and/or global position satellite (GPS) capabilities. The Service Provider may collect, review, store, transmit, and report information about the Client, the System, the Vehicle, or the Program to the Administering Authorities, to other governmental, law enforcement, or judicial authorities, or to other persons or entities whom the Service Provider

7. ENDMENT: The Client acknowledges that the System contains various personal data collection, recording, monitoring, storage, deletion, inspection, and reporting capabilities, which may include a camera and/or global position satellite (GPS) capabilities. The Service Provider may collect, review, store, transmit, and report information about the Client, the System, the Vehicle, or the Program to the Administering Authorities, to other governmental, law enforcement, or judicial authorities, or to other persons or entities whom the Service Provider

8. The Client shall return to the designated service center to have the System removed from the Vehicle when the Term ends. If the Client does not do so within five (5) days after the Term ends, then the Service Provider and its employees, and representatives shall have the right to recover possession of the System from the Vehicle whenever it is located without such entry being deemed to be a trespass or unlawful entry. The Client appoints the Service Provider as the Client's lawful agent for such purpose, with full power of substitution and with full authority to gain access and entry to the Vehicle and to remove the System from the Vehicle by whatever means required. Neither the Service Provider nor its employees, agents, or representatives shall be liable for any loss or damage occasioned thereby, and the Client agrees to indemnify and hold harmless the Service Provider, its affiliates, and their respective employees, agents, and representatives from and against any liability arising therefrom. The Client agrees to keep the System free and clear of all liens and encumbrances and will refrain from removing insignia or lettering on the System which indicates the Service Provider's ownership.

9. In the event that the Program is terminated before the Term ends, upon the written agreement of the Client and the Service Provider, the Client will pay the Service Provider a fee for cancellation in accordance with the Program's Fee Schedule. The fee shall be calculated based on the number of days remaining in the Term and will be due and payable at the time of cancellation.
TERMS & CONDITIONS

Client to sign below only if electing to opt out of the Plan:

Client Name (Print): ___________________________ Date: ___________________________

Client Signature: ___________________________ Date: ___________________________

*If Client would like to participate in the Plan, then Client should not sign in space above.

8. TERM AND EARLY TERMINATION: The Term of this Agreement is described in the Program Service Agreement. Except as limited by law or the terms of the Program, the Service Provider or the Client may terminate this Agreement at any time prior to the end of the Term by giving written notice of termination to the other party. This Agreement shall terminate immediately if the Service Provider receives notification from the Administering Authorities that the Client’s participation in the Program has been revoked, suspended, canceled or otherwise terminated. In addition, the Service Provider may terminate this Agreement at any time prior to the end of the Term by giving written notice to the Client upon the occurrence of any of the following:
(a) Failure by the Client to pay any fees, charges or expenses arising under this Agreement when due;
(b) Failure by the Client to return the Vehicle to the designated service center within five (5) days after any scheduled monitor date;
(c) Damage or loss of the System caused by any act or omission of the Client or occurring while the System is in the Client’s possession or control;
(d) Any tampering with or attempting to circumvent the System, as determined by the Service Provider in its sole discretion;
(e) Any attempted sale, lease, assignment, transfer of title, or other transfer of legal or equitable ownership or possession of the Vehicle by the Client or registered Vehicle owner without the Service Provider’s prior consent;
(f) Any actual or threatened seizure, impoundment, repossession, or dispossession of the Vehicle; or
(g) Any other breach of this Agreement by the Client.

9. GENERAL PROVISIONS: This Agreement constitutes the entire agreement of the parties. Service Provider employees or representatives have no authority to vary the terms of this Agreement. The Client may not rely upon, and the Service Provider will not be bound by, any variations or representations, whether oral or written, made by the Service Provider employees or representative. No provision of this Agreement may be changed except by a written agreement that is signed by the Client and the Service Provider.

No exercise or waiver, in whole or in part, of any right or remedy related to this Agreement by the Service Provider will operate as a further waiver of that right or remedy or as a waiver of any other right or remedy. No delay on the part of the Service Provider in exercising any right or remedy will operate as a waiver of that right or remedy. No waiver by the Service Provider will be effective unless made in writing and signed by the Service Provider. If any provision of this Agreement is prohibited by law or found to be invalid, it shall not affect the remaining provisions.

Section headings are included in this Agreement for convenience only and have no independent meaning or effect.

Any notice given pursuant to this Agreement shall be sufficient if in writing and delivered personally or sent by ordinary prepaid mail to the address of the Service Provider or the Client, as the case may be. In the event that notice is given by mail as aforesaid, it shall be deemed to have been received on the third business day after mailing.

This Agreement shall be construed and enforced in accordance with the laws of the State of Ohio (regardless of any applicable conflict of laws principles) and the parties hereby expressly submit to the jurisdiction of the courts of Hamilton County, Ohio for adjudication of any dispute arising therefrom.

The Client may not assign or delegate its rights or obligations under this Agreement, in whole or in part. The Service Provider may assign or delegate its rights or obligations under this Agreement, in whole or in part, at any time.

Capitalized terms used but not defined in these Terms and Conditions shall have the meanings given to them in Program Service Agreement version SA201511 or the Fee Schedule version FS201506, as the case may be.

By signing below, Client acknowledges that Client has read and understood the Terms and Conditions of the Program.

### Indicator Display Overview

**Indicator** | **Color** | **Description**
--- | --- | ---
WAIT (On Steady) | ORANGE | The Device is preparing to accept a breath test. This lasts for varying amounts of time depending on temperature, from a few seconds to up to five minutes in below zero temperatures.
WAIT (Flashing) | ORANGE | Before a test is taken: This indicates that the Camera has not detected the Handset in the image. The Handset will emit a ‘BLAP BLAP’ tone. After a test is taken: This indicates that the Camera was not able to detect or track the Handset during the test.
BLOW (Flashing) | GREEN | The Device is ready to accept a breath test. Hum and blow into the Device for about 5 seconds. Device will emit a low tone indicating that you are blowing properly.
ABORT (On Steady) | RED | Improper breath test delivered. User did not hum and/or blow in a steady solid fashion. Device will default back to the WAIT stage and you may repeat the test.
PASS (On Steady) | GREEN | User has properly passed the test and may start the vehicle.
WARN (On Steady) | ORANGE | After delivering a breath test, alcohol was detected at a low level, but not enough to FAIL and you may still start the vehicle.
FAIL (On Steady) | RED | User has failed the alcohol breath test. Device will either default to WAIT or to TEMPORARY LOCKOUT.
FAIL (Flashing) | RED | You have failed the breath test with a very high BAC reading. Device will either default to WAIT or to TEMPORARY LOCKOUT.
RUN (Flashing) | GREEN | You may start your vehicle at this time by turning the key either after passing a test or while in Stall Protect if your vehicle stalls out.
RUN (On Steady) | GREEN | This indicates that the engine is running.
POWER (On Steady) | GREEN | This light comes ON when key is ON and goes OFF when the Key is turned OFF, indicating proper power to the Device.
POWER (Flashing) | GREEN | Indicates your vehicle battery is weak or the voltage is low.
